End User Wi-Fi
FACTS & FIGURES

In January 2022, almost **307 million** U.S. households had internet access, and **78%** of them have **broadband internet**.

58% of Wi-Fi devices in 2022 are **Wi-Fi 6 compatible**, up from 43% in 2021.

60% of U.S. broadband households with a networking router **received that device from their broadband service provider**.

Annual sales of all connected home devices will increase to **520 million units** in 2022.

Of the **92%** of Americans who use the internet, at least occasionally using a smartphone, tablet or other device – **89% go online daily** and **31% go online almost constantly.**

As such, it's not a stretch to realize that **37%** of U.S. broadband households report that their Wi-Fi **NETWORK SEEMS SLOW.**

THE PROBLEM FOR
Cable and Telco Operators

Operators today all offer some sort of **WI-FI HARDWARE**, either a combined device **(modem + Wi-Fi router + phone)**, or separate devices for Wi-Fi and Internet/phone.

Forced to compete with each other, operators need a **quick and affordable process** to **ENSURE CONSISTENT WI-FI PERFORMANCE** in customer's Wi-Fi centric homes.

Broadband operators must **"REQUALIFY"** their own devices as they are **recycled from one customer to the next** to ensure they're working properly.

Test facilities for Wi-Fi have some of the **DENSEST WI-FI SIGNALS**, due to the **sheer number of devices** under test.

A SHIELDED Wi-Fi environment is critical to accurate **testing and recertification**.
